PROJECT TITLE : ONLINE TEST APP

PROBLEM STATEMENT:

Online Test App is developed or designed for educational institutes like school, colleges, and private institute to conduct logic test of their students on regular basis. This application software can reduce the hectic job of assessing the answers given by candidates manually. The registered students response or the answers can be checked automatically and instantly. It will reduce the paper work to be integrated. The result can be shown immediately to the students reducing the anxiety.

In this Application, we build up two modules that is –

1) Registration :

In this module, the student will register with his identification details such as Name, USN, Gender, etc. And then will directly go for the quiz page.

2) Quiz Page:

In this module, the students will answers quiz related to the topic which is suggested (like a multiple choice question) and the finally he/she have to submit it .After submitting, he/she will be displayed with the result instantly so the student can verify.

SOLUTION (Source Code):

1)Registration Page:

```
package com.mycompany.mini;
import javax.swing.*.*;
import java.awt.*.*;
import java.awt.event.*;
public class Registration {
    JFrame frmRegistration;//to construct a frame
    JLabel lblFirstName,lblLastName,lblUSN,lblGender,lblBranch,lblEmail;//initialization
    JTextField txtFirstName,txtLastName,txtUSN,txtEmail;
    JRadioButton rdoMale,rdoFemale;
    JButton btnSubmit;

    public void addControls(){
        lblFirstName=new JLabel("First Name:");//create a label with text
        lblFirstName.setBounds(50,50,100,30);//set the sizes
        frmRegistration.add(lblFirstName);//adding to frame
        txtFirstName=new JTextField(" ");//create a new textfield initialized with the specified text and
        columns
        txtFirstName.setBounds(150,50,150,30);
        frmRegistration.add(txtFirstName);

        lblLastName=new JLabel("Last Name:");//create a label with text
        lblLastName.setBounds(50,100,100,30);//set the sizes
        frmRegistration.add(lblLastName);//adding to frame
        txtLastName=new JTextField(" ");//create a new textfield initialized with the specified text and
        columns
        txtLastName.setBounds(150,100,150,30);
        frmRegistration.add(txtLastName);

        lblUSN=new JLabel("USN:");//create a label with text
        lblUSN.setBounds(50,150,100,30);//set the sizes
        frmRegistration.add(lblUSN);//adding to frame
        txtUSN=new JTextField(" ");//create a new textfield initialized with the specified text and columns
        txtUSN.setBounds(150,150,150,30);
        frmRegistration.add(txtUSN);

        btnSubmit = new JButton("Submit");
        btnSubmit.setBounds(100,350,150,30);//set the sizes
        frmRegistration.add(btnSubmit);

        lblGender=new JLabel("Gender:");//create a label with text
        lblGender.setBounds(50,250,100,30);//set the sizes
        frmRegistration.add(lblGender);
```

```

        rdoMale= new JRadioButton("Male");//creates a unselected radiobutton with no text
        rdoMale.setBounds(150,250,80,30);
        frmRegistration.add(rdoMale);//adding to frame
        rdoFemale = new JRadioButton("Female");//creates a unselected radiobutton with no text
        rdoFemale.setBounds(250,250,80,30);
        frmRegistration.add(rdoFemale);
        ButtonGroup bgGender = new ButtonGroup();//manages the selected or unselected state for a set
of buttons
        bgGender.add(rdoMale);//adding to buttongroup
        bgGender.add(rdoFemale);

        lblBranch = new JLabel("Branch:");//create a label with text
        lblBranch.setBounds(50,200,100,30);//set the sizes
        frmRegistration.add(lblBranch);//adding to frame
        String branches[] = {"CSE", "ELN", "EEE","CIVIL","MECH"};
        JComboBox cmbBranch = new JComboBox(branches);//create a jcombobox that contains the
elements in the specified array
        cmbBranch.setBounds(150,200,100,30);
        frmRegistration.add(cmbBranch);//adding to frame

        lblEmail=new JLabel("Email ID:");//create a label with text
        lblEmail.setBounds(50,300,100,30);//set the sizes
        frmRegistration.add(lblEmail);//adding to frame
        txtEmail=new JTextField(" ");//create a new textfield initialized with the specified text and
columns
        txtEmail.setBounds(150,300,150,30);
        frmRegistration.add(txtEmail);

    }

    public void addActionListeners(){
        btnSubmit.addActionListener(new ActionListener(){ //method to invoke automatically whenever
we click on the registered component
            public void actionPerformed(ActionEvent e){
                String s1 = txtFirstName.getText();//to get text from the user
                String s2 = txtLastName.getText();
                String s3 = txtUSN.getText();
                String s4 = txtEmail.getText();
                JOptionPane.showMessageDialog(frmRegistration, "Submitted");//optionpane class is used to
provide standard dialog boxes , herw we use message dialog box
            }
        });
    }

    public void displayFrame(){
        frmRegistration = new JFrame("Registration Form");//give name to the frame

```

```

    frmRegistration.setSize(500, 500);//used to set the size of the vector
    frmRegistration.setResizable(false);//user cannot resize the frame
    addControls();
    addActionListeners();
    frmRegistration.setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);//it is used to specify one of
the several options for the close button
    frmRegistration.setLayout(null);//we can position our components by using this
    frmRegistration.setVisible(true);//it makes the frame appear on the screen
}
public static void main(String args[]){
    Registration reg = new Registration();
    reg.displayFrame();
}
}

```

2) Quiz Page:

```

package com.mycompany.mini_1;
import javax.swing.*;
import java.awt.event.*;
import java.awt.*;
public class quiz {

    public static void main(String[] args){
        JFrame frmOnlineQuiz = new JFrame("Online Quiz");//to construct a frame and online quiz is the
name of the frame

        JMenuBar mbar = new JMenuBar();//creates a new menubar
        mbar.setBounds(0,0,300,30);//to set size
        frmOnlineQuiz.add(mbar);//add menu to the menubar

chkJVM.setBounds(50, 580, 250, 20);
frmOnlineQuiz.add(chkJVM);
JCheckBox chkJRE = new JCheckBox("JRE");//create an initially unselected checkbox with text
chkJRE.setBounds(50, 620, 250, 20);
frmOnlineQuiz.add(chkJRE);
JCheckBox chkJDK = new JCheckBox("JDK");//create an initially unselected checkbox with text
chkJDK.setBounds(50, 660, 250, 20);
frmOnlineQuiz.add(chkJDK);
JCheckBox chkJDB = new JCheckBox("JDB");//create an initially unselected checkbox with text
chkJDB.setBounds(50, 700, 250, 20);
frmOnlineQuiz.add(chkJDB);

JLabel lblque5 = new JLabel("Que5 : Is java platform independent?");//create a label with text
lblque5.setBounds(30,200,1800,1070);//to set size
frmOnlineQuiz.add(lblque5);//adding to frame
String[] answers = {"yes","no"};//declararation of strings
JList lstAns = new JList(answers);//create a jlist that displays the elements in the specified array
lstAns.setBounds(50,745,300,40);
frmOnlineQuiz.add(lstAns);//adding to frame

JButton btnSubmit = new JButton("Submit");//creat button with the specified text
btnSubmit.setBounds(500,750,250,30);
frmOnlineQuiz.add(btnSubmit);

btnSubmit.addActionListener(new ActionListener(){ //method to invoke automatically
whenever we click on the registered component
    public void actionPerformed(ActionEvent e){

```

`JOptionPane.showMessageDialog(frmOnlineQuiz, "Answers \n1.double \n2.precision \n3.use of pinters \n4.JDB \n5.yes");` //joptionpane class is used to provide standard dialog boxes , herw we use message dialog box

```
    }  
    });
```

`frmOnlineQuiz.setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);` //it is used to specify one of the several options for the close button

`frmOnlineQuiz.setSize(1000,1000);` //used to set the size of the vector

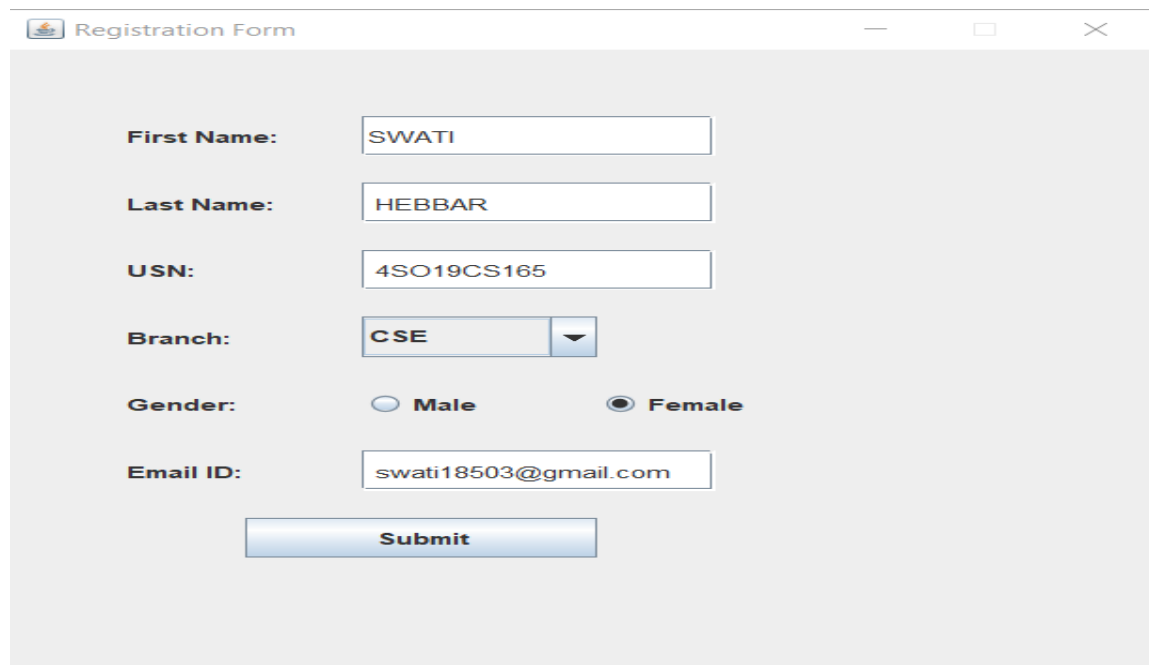

`frmOnlineQuiz.setLayout(null);` //we can position our components by using this

`frmOnlineQuiz.setVisible(true);` //it makes the frame appear on the screen

```
    }  
}
```

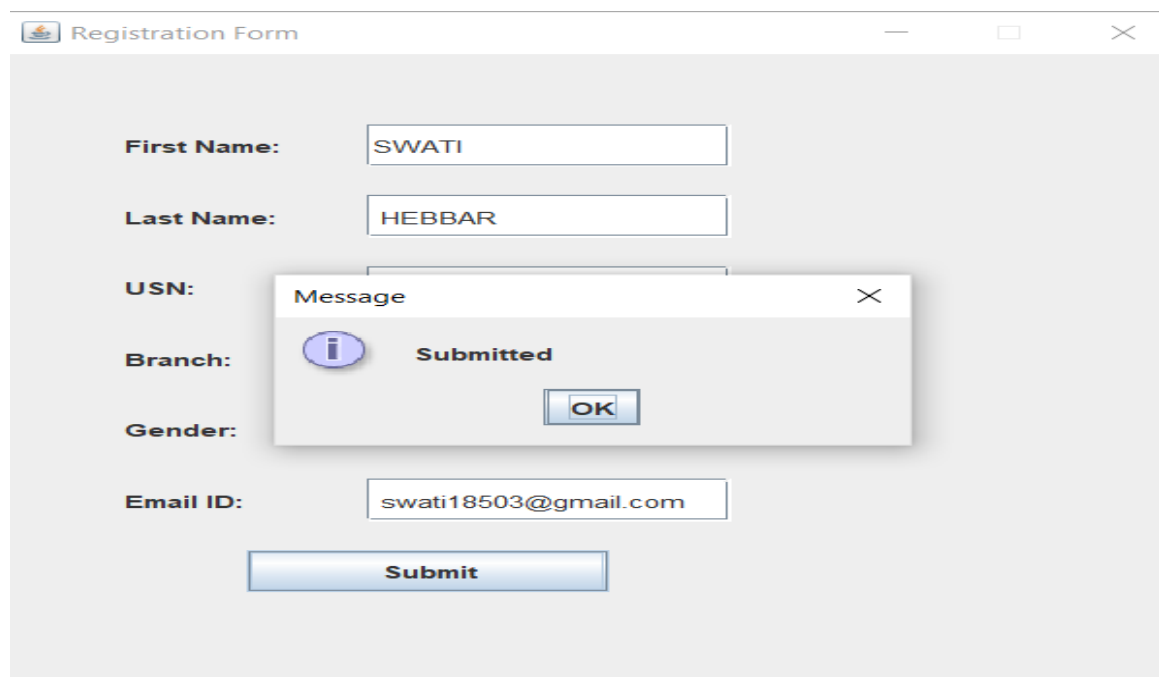

OUTPUT (Snap Shots):

1)Registration Page:

A screenshot of a web application window titled "Registration Form". The form contains the following fields and controls:

- First Name:** Text input field containing "SWATI".
- Last Name:** Text input field containing "HEBBAR".
- USN:** Text input field containing "4SO19CS165".
- Branch:** Dropdown menu showing "CSE".
- Gender:** Radio buttons for "Male" (unselected) and "Female" (selected).
- Email ID:** Text input field containing "swati18503@gmail.com".
- Submit:** A blue button at the bottom of the form.

A screenshot of the same "Registration Form" window, but with a "Message" dialog box overlaid in the center. The dialog box has a title bar "Message" and a close button (X). It contains an information icon (i) and the text "Submitted". Below the text is an "OK" button. The form fields in the background are the same as in the previous snapshot, with the "Submit" button visible at the bottom.

Questions

Que1 : Which data type value is returned by all transcendental math function?

☐ int

☐ float

☒ double

☐ long

Que2 : Which of the following is the advantage of BigDecimal over double?

☐ syntax

☐ memory usage

☐ garbage creation

☒ precision

Que3 : Which of the following is not a Java features?

☐ dynamic

☐ architecture neutral

☒ use of pointers

☒ object oriented

Que4 : ____ is used to find and fix bugs in the Java programs.

☐ JVM

☐ JRE

☐ JDK

☒ JDB

Que5 : Is java platform independent?

Submit
